

AI & Spring AI – Frequently Asked Questions

What is Artificial Intelligence (AI)?

What are the main types of AI?

What is Machine Learning?

How is Machine Learning different from AI?

What is Deep Learning?

What are neural networks?

What is Natural Language Processing (NLP)?

What is a Large Language Model (LLM)?

What are embeddings in AI?

What is a vector database?

How does similarity search work?

What is Retrieval-Augmented Generation (RAG)?

Why is RAG used in AI applications?

What is prompt engineering?

What is AI hallucination?

How can hallucinations be reduced?

What is fine-tuning?

What is transfer learning?

What is a transformer model?

What is Spring AI?

How does Spring AI integrate with LLMs?

What is ChatClient in Spring AI?

What is VectorStore in Spring AI?

How does Spring AI support RAG?

What embedding models are supported in Spring AI?

How does metadata filtering work in Spring AI?

What is PromptTemplate in Spring AI?

How does Spring AI handle context injection?

How is Spring AI different from LangChain?

What are common use cases of Spring AI?
